MEL1 -- Same as 1 with color graphic report	* All cool season grass, fescue, blue grass etc.	212 Roses
MEL2 -- Same as S3 with color graphic report	514 Lawn, Centipede	
Soluble Salts -- (suggested for overfertilized soils)	515 Lawn, Bermuda	Golf Course:
Sodium -- (suggested for beach soils)	509 Athletic Field	521 Green 523 Rough
	214 Shrubs	522 Tee 524 Fairway
	301 Flower Beds	

How To Take A Soil Sample

Each sample should represent only one soil type or area—for example, a lawn, vegetable garden or perennial landscaped area. If one area of your yard seems healthy and another has bare or yellow areas, sample healthy and unhealthy areas separately even if both are lawn grasses or flower gardens, etc. For each unique area, take at least six to eight samples. Mix these 6-8 soil samples in a clean, plastic bucket. If the bucket has been used to hold fertilizer or other chemicals, wash it thoroughly before using it for soil samples. Take out 2 cups of the soil mixture, put into a Ziploc bag and labeled your ID with a water-resistant marker on each sample. Completely fill in the information required on this form and mail/ship with a sturdy bag or box. Please give your e-mail address to receive notification on sample arrival and lab report. Be environmental conscience by checking paperless for email only reporting.

To take a soil sample, use a soil-sampling probe, an auger, a spade or shovel. If a shovel or a spade is used, dig a V-shaped hole to sample depth (4-6"), then cut a thin slice as shown on the above diagram.
